

Project Proposal: Android Weather App

Project:

We decided that we are going to design a weather application for the Android platform. This application is going to have 4 layout pages. Including, create a local account page, login page, a weather overview page, and a detailed weather page of a location of your choosing.

Features:

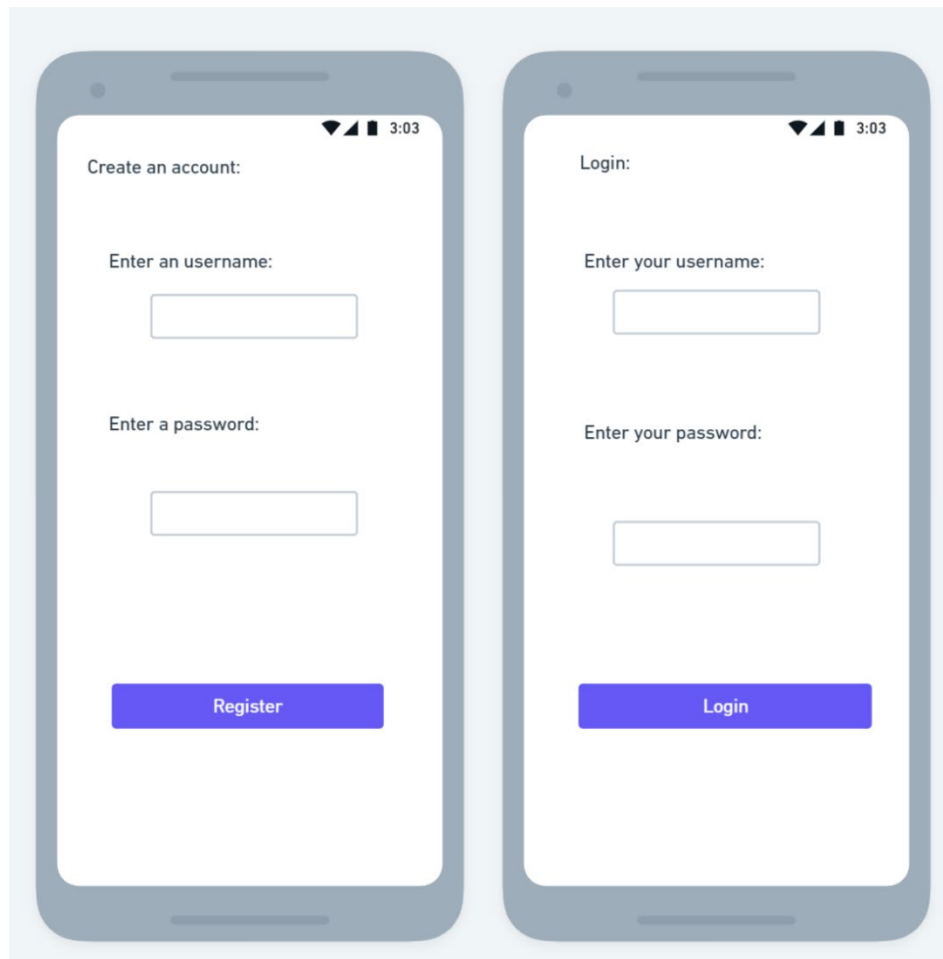

- Create an account functionality.
- Login page using the credentials from created account.
- Summary of the current weather of your location.
- A detailed summary of weather information of a location of your choosing.
- A Database to store credential of the user login information.

User Stories:

- As a user I want to be able to log in with my email or username.
- As a user I want to be able to create an account.
- As a user I want to be able to see the weather in different cities.
- As a user I want to see a detailed description of my weather.
- As a user I want my stored credentials to be saved.
